

Buttons, check boxes, hyperlinks, [navigation tabs (including Drop menus)] and text areas respond to **Click, Click on** or **Press**. **Note:** There are no commands to run Flash.

You use **click on** to set focus on text areas and with **check boxes** you can also **speak check** or **uncheck**.

With focus set on a text area you can **speak** a phrase however if you **stop** you need to **speak space** before speaking again. When you are done, to process the event, **speak press the enter key** (this needs to be spoken clearly or it will be entered as another phrase).

If you mess up your text box, to clear it, **speak clear Box**. You can also **see** **Undo/Redo Keys**

For scrolling the page detail **speak click on Scroll On**. **Note:** (Custom) automatically turns **scroll on**

**Note:** It's a good idea to have (Custom) search closed or **speak\* stop Dictation**. If you speak something incorrectly text fields are like magnets. Your highlights, text and settings will be intact if you need to reopen custom. If you stopped Dictation if need **\*start Dictation**. **Note:** if you elect **not** to close custom **\*click on Main Page** then **\*scroll**

**Note:** YouTube videos are paused when you **select** them. **Speak\* Press Full Video**. On YouTube you can **\*press pause** or **play**. When you're done **\*go back**. **[Selection Lists] speak\*click on Rest of Series \*click on (a list item)**

Some things are hard to speak like Orisinal, say Or. When there are word(s) speaking parts works.

**Examples:** **Note:** If for any reason speaking appears stuck **speak click on\* Main page** or **Sidebar**

**Text Search Engine/Games/ speak\* click on use voice** - **\*click on God Maps** (God Maps in now highlighted) **\*scroll down or up** depending on how the list appears. - the list moves **\*click on open text** **\*\*\*Text box is at cursor** - **speak\* Afflictions \*press the enter key** [(#62) highlights] - **\*Process Request** you are on the new page **\*go back** Now you can chose a different list and repeat the process by starting with **\*click on use voice**. **Note:** Some things are hard to pronounce but you can enter (a-z) by **speaking**. Some letters are tricky to speak like (A) so if you have trouble **speak and** then **backspace** 2 times. **Also see \*RP\* Note:** if after entering a request you change you mind **\*click on use voice** - if need **\*scroll up** or **down** now again **speak click on open text** repeat (**\*\*\*above**). **Note also:** You can only enter word(s) to the category you have selected all though others many appear as you scroll.

**Site Map speak\* click on Menu by area** (the list drops) **\*click on (an entry)** (it goes there). **\*scroll up or down \*click on (entry)** (opens it in a new tab). **\*close tab** cursor is on (entry). **More dynamically, (with any site page) \*click on Custom \*(a word) \*press the enter key** (if highlights) see **Scrolling** and note **\*\*\* (below)**.

**Google or Word Press search results speak\* press the enter key** (everything highlights on page (1 of ?)) **\*click on main page \*Scroll down** (until you see the page numbers at the bottom) **\*click on 2 \*click on Set Focus \*Press the enter key** 2<sup>nd</sup> page is highlighted. **note \*\*\* (below)**.

**YouTube play lists speak\* click on (a selection list) [\*scroll down (until you see the movies) \*click on next (moves 1/? Next>>)]**. At list end **\*click on pre.] \*click on (a movie title)** (YouTube becomes active and starts to play) as it plays you can continue process **[] - to stop \*refresh page - \*click on (another selection list)** .

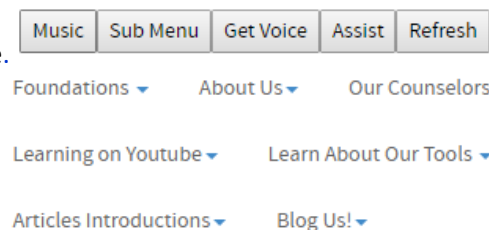

When a new window is opened, same tab, **speak go back** to take you to the prior page. This is cursive. You can also **speak go forward**. This is also cursive.

If you opened a new tab and need to close it **speak close tab**. With **(Tab)** You can also **see** **Tabs and Navigation**

Using Custom: The **(clear)(Back)(Next)\*\*\*** do not work as expected.

We believe this is a slight deficiency with **Goggles** current implementation of **webkitspeechrecognition** and will improve with time. Until that time however **speak scroll down** or **scroll up** to see highlights.

We have found no way to hover Word Press menu entries to get drops to appear so we re-created the lists on the sidebar that Appears on every page.

```

```
<body onResize="setWindowSize()"; onLoad="BrowserDetection()">
<p id="Progresssmsg" ></p>
<div class="tabH" style="width: 100%;">
  <button onClick="this.blur()" ><font color="white">Main Page</font></button>
</div>
<div id="playground" class="noscroll"> All pages need this minimum requirement
  <p id="Name" >SearchG</p>
  Name corresponds to 1st column above
</div>
</body>
```

The tab template uses the alphabet (A-Z) making the tab limit for a given page 26 however Java is case sensitive so if need you could also use lower case (a-z) to double that.

(B) is always the top level and a single level call would be format example: http://www.dynamicsofgrowth.com/mythology-science/#tabs-1

Multiple layer calls have a slightly different format example:

http://www.dynamicsofgrowth.com/mythology-science/#B1,F1

If you want to stay at a given level but position into that level at a point other than starting example: /#B1,B9

You can recursively call tab levels opening by their order example: /#B1,F1, C4, D7, ....etc.. Q1, Q17

### Top level

```
<div class="tabG" style="width: 100%;">
<p><button id="tabs-1B" class="tablinksB" onClick="openTab(event, 'tabs-1', 'tablinksB','tabcontentB',0)">Topic 1</button>
<button id="tabs-2B" class="tablinksB" onClick="openTab(event, 'tabs-2', 'tablinksB','tabcontentB',0)">Topic 2</button>
<button id="tabs-3B" class="tablinksB" onClick="openTab(event, 'tabs-3', 'tablinksB','tabcontentB',0)">Topic 3</button>
<button id="tabs-4B" class="tablinksB" onClick="openTab(event, 'tabs-4', 'tablinksB','tabcontentB',0)">Topic 4</button>
<button id="CloseB" class="tablinksB" onClick="openTab(event, 'Close', 'tablinksB','tabcontentB',0)">Close</button>
<button id="TopB" class="tablinksB" onClick="openTab(event, 'Close', 'tablinksB','tabcontentB',0)" style="display:none;">Top</button></p>
```

### Progressive levels

```
<div class="tabG" style="width: 100%;">
<p><button id="tabs-1FB" class="tablinksF" onClick="openTab(event, 'tabs-1F', 'tablinksF','tabcontentF',0)" >Topic 1</button>
<button id="tabs-2FB" class="tablinksF" onClick="openTab(event, 'tabs-2F', 'tablinksF','tabcontentF',0)">Topic 2</button>
<button id="tabs-3FB" class="tablinksF" onClick="openTab(event, 'tabs-3F', 'tablinksF','tabcontentF',0)">Topic 3</button>
<button id="CloseF" class="tablinksF" onClick="openTab(event, 'Close', 'tablinksF','tabcontentF',0)">Close</button>
<button id="TopF" class="tablinksF" onClick="openTab(event, 'Close', 'tablinksF','tabcontentF',0)" style="display:none;">Top</button></p>
```

Top and Close ( toggle hidden) Top is with the all tabs open (Option)
